## SOFTWARE ENGINEERING IN DEVELOPING COMMUNITIES

26/7/11 Edwin Blake & Gary Marsden

UNIVERSITY OF CAPE TOWN  
Department of Computer Science

## 2 Where are we?

Theme: Align the technical with the social and cultural context.

But first:  
Where are we?  
What is *our* context?

SE in Developing Communities 26/7/11

## 5 Develop! Progress! Transform! Leap-Frog!

2007

## 6 Progress

UNIVERSITY OF CAPE TOWN  
Department of Computer Science  
Communities 26/7/11

### Progress

7

- The privilege of historic backwardness – and such a privilege exists – permits, or rather compels, the adoption of whatever is ready in advance of any specified date, skipping a whole series of intermediate stages.
- Leon Trotsky, 1932–3

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### More Progress

8

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### What to do (in ICT)?

9

Requirements Engineering?

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### ICT for Development

10

- Scope of ICT4D:
  - Offered as support in achieving goals such as empowerment, democracy and better lives, **but**:
    - Recognize that computing and communication technologies have a definite but circumscribed value
  - The underlying reason for this faith is that ICT is a Universal Enabling Technology, **but**:
    - it only becomes universal in the hands of a designer and appropriator.
- Mobile phones seem to be the platform of choice, **but**:
  - the expense
  - strictly individualized nature

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### How to do ICT Design and then ICT Development to Achieve ICT for Development?

11

### The Big Question

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### Cathedral and Bazaar

12

- Top-down and bottom up development
- Which of course refers us to the other sense of **development**

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### Requirements Elicitation

13

- *Structured digital storytelling*
- *Cultural probes* (or technology probes)
- *Contextual inquiry*
- *Ethnographic techniques*
- Approach:
  - start gathering information in a bottom-up manner;
  - Information processed, analysed and abstracted
  - into sets of “goals” and “needs”
 → leads to the requirements specification

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### Contextual Inquiry/Design

14

Design-oriented approach aimed at getting a grip on ‘context’.

Practical way to gather information relevant for design

Alternate between watching and probing

Apprentice / Master relationship is fundamental for the investigation

No explicit teaching, just watching the work, detecting what matters, seeing details.

Requires humility, inquisitiveness, attention.

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### Ethnography (“write a culture”)

15

From social and cultural anthropology.

- Rich descriptions based on long-term fieldwork in a community.
- for ICT the aim is to inform design.

Aim: understanding how people perceive and organise their world.

- Cultural and conceptual phenomena
- Behavioural patterns and material conditions.

Important principle: **Immersion** – researcher should spend a significant amount of time in the field.

- Participant observation is the basic method:
  - ethnographer participates in the community.
  - retains a position as analytical observer

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### The Issue

16

- Software engineering assumes that, on some level, the problem is identified
  - Requirements analysis
- Even iterative and agile SE methods, where the customer is integrated into the development cycles, still assume that the problem is well understood.
- In most ICT4D studies, we have no idea what the problems are before we start
- Agile and user centred approaches to software engineering are moves in the right direction ...

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### Summary of the issue:

17

- **It does not work to tackle social and economic development top-down nor does top-down software development work.**

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

UNIVERSITY OF CAPE TOWN  
Department of Computer Science

### 18 First Ideas

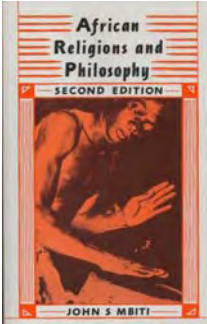

Ubuntu  
Action Research

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### Mbiti's "African Concept of Time"

19

- In traditional African thought, there is no concept of history moving 'forward' towards a future climax, or towards an end of the world.
- The notion of a messianic hope, or a final destruction of the world, has no place in traditional concept of history. So African peoples have no 'belief in progress', the idea that the development of human activities and achievements move from a low to a higher degree.

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### I am, because we are; and since we are, therefore I am

20

- "My humanity is caught up, is inextricably bound up in yours."  
Archbishop Desmond Tutu
- In Zulu one can say "umuntu ngumuntu ngabantu"
  - Sotho: "Motho ke motho ka batho (babang)"
  - "a person is a person through other persons"
  - "a person is a person because of other persons"
  - "I am what I am because of what we all are"

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

21

### Shadow Side to Ubuntu?

Romanticised notions of "other": African orientalism  
Mazrui: "strange combination of cultural condescension, paternalistic possessiveness and ulterior selectivity"

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### Summary so far:

22

- Ideas of community are expressed by Ubuntu

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### Use Action Research ... if you're clueless

23

Action research applies an engineering paradigm for dealing with complex design situations in order to achieve democratic social reconstruction.

- Designers do not initially understand local issues and culture

*while at the same time*

- Local communities cannot appreciate the potential of ICT to address their development needs.

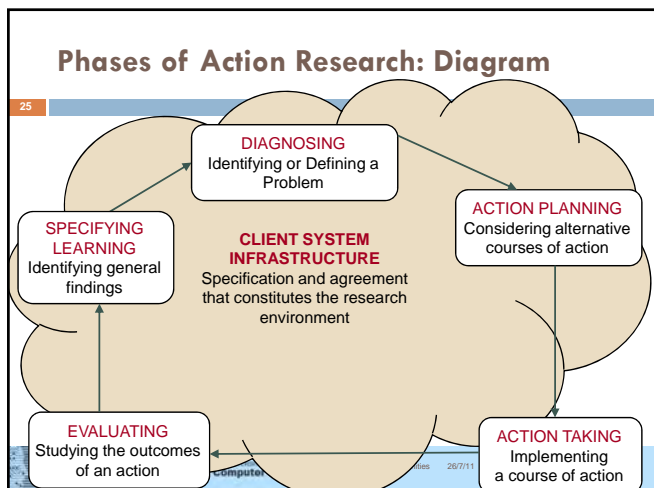

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### Use Action Research ... for development

24

- The cyclical approach to action and reflective learning has been around for a long time. It was advocated in its various forms in the post World War II development of the UK, USA and Japan.
- More as a mindset, an attitude.
- More emphasis on the Action (or Engineering) aspect than is often done while retaining the key importance of learning and reflecting.

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

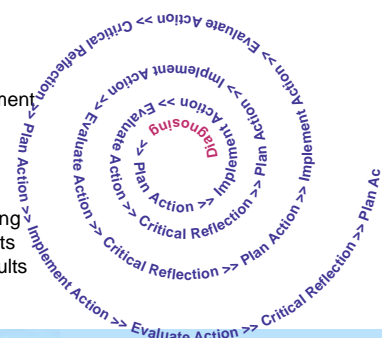

### Action Research Cycle

facilitating change in community through facilitating action

cyclical software development process: participatory design + prototype evaluation.

**Diagnosing** →  
planning → implementing  
plan → observing results  
→ reflecting on the results

- ### Ethnographic Action Research
1. Ethnography: long term embedding in a culture to gain deep understanding.
  2. Participatory Techniques: researchers and participants work together to understand the problem.
  3. Action Research: combining action with developing further understanding (see earlier)
- UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

- ### Ethnography
- Understanding a (local) culture through
    - ▣ Participant observation
    - ▣ Immersion
  - Make sense of grand ideas within a context
  - Take: "Impact of Internet on Empowerment"
    - ▣ Positivists would measure some access statistics
    - ▣ Ethnographer would go to a specific place and look at 'internet', 'impact' and 'empowerment' and what they mean for that place
- UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

- ### Carrying out Action and Research
- Usually the research starts broadly building up a picture of community and ecology
    - ▣ Themes/stories
    - ▣ Building relationships
    - ▣ Enlisting participants
    - ▣ Social mapping
  - Narrowing - targeted research
    - ▣ Answering specific questions for specific groups
- UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

## Carrying out Action and Research II

31

Organize the actions into small units which can be completed in short time

Take field notes on every action

- ▣ Actions includes: fieldwork entrance letters, fixing computers items, meetings and workshops
  - Anything that consumes our time in the field is part of the action

Use some known data analysis techniques

- ▣ Align our field notes empirical material in those techniques

Think and make sense of the actions and results

- ▣ Some time is needed away from the field

## Field notes

32

Expect to spend 1 hour of working day writing field notes

Field notes should be written up as soon as possible after leaving the field site, immediately if possible

- ▣ Plan to leave a block of time for writing just after leaving the research context

Be self-aware

- ▣ Reflect on what you are doing as you are doing it

## Data Collection Methods I

33

Semi-structured interviews

- ▣ Participant observations
- ▣ Analysis of documents
- ▣ Use of checklists: data registers, analysis tools, and health workers
- ▣ Software prototyping process
- ▣ Group discussions and Training workshops
- ▣ Video/still pictures
- ▣ Analysis of press media reports

## Data Collection Methods II

34

- ▣ Audio recording is no substitute for field notes
- ▣ 6 hours transcription for 1 hour audio
- ▣ Use 'coding' to speed things up
- ▣ Cluster recurring issues under common themes
- ▣ Disseminate findings to feed into 'action' and 'planning'

## Data Analysis and Presentation

35

Interviews, Observations, Questionnaires, and site documents work together to support the research claims.

Empirical materials are presented in

- ▣ Descriptive statistics (quantitative data)
  - Model and measurement instrument for evaluating user satisfaction (7-point scale)
- ▣ Qualitative excerpts of encoded user reactions
- ▣ Software evaluation via criteria such as reliability and usability
- ▣ Screen shots of programs

Secondary Sources of Data

- ▣ Documents from the field
- ▣ Photos and videos

## Ethnographic Action Research: Resources

36

- ▣ *Ethnographic Action Research: A User's Handbook*. Jo Tacchi, Don Slater, & Gregory Hearn (2003). UNESCO, New Delhi, India.  
[eprints.qut.edu.au/4399/](http://eprints.qut.edu.au/4399/)

**Summary so far:**

37

- Ideas of community are expressed by Ubuntu
- (Ethnographic) Action research allows democratic development

SE in Developing Communities 26/7/11

UNIVERSITY OF CAPE TOWN  
Department of Computer Science

38 **Practice — a Pragmatist View**

Have come to believe that creating knowledge is inextricably intertwined with effective action.

Knowledge that does not lead to effective action is not really knowledge

A failure to create effective systems is equivalent to a failure of understanding.

SE in Developing Communities 26/7/11

**Deaf Telephony: Case-study Context**

39

- Project set out to assist South African Deaf people to communicate with each other, with hearing people and with public services.
- Team has been working for ten years with a Deaf community that has been disadvantaged due to both poverty and deafness.
- Deaf users in this community started out knowing essentially nothing about computers.
- Their preferred language is South African Sign Language (SASL) and this use of SASL is a proud sign of their identity as a people. Many are also illiterate or semi-literate.
- Deaf people encounter many problems with communication.
- Currently communications technology does not support sign language.

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

**Deaf Telephony : Method**

40

- The (eventual) method shares aspects of community-based co-design and action research.
- This methodology is a way of exploring a design space in a way that alleviates the restrictions of the designer's own viewpoint and bias.
- In a cyclical fashion the designers develop according to their skills and learning and according to the users' expressed requirements and their learning.
- The researchers and the users end up being the design team.

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

**Outcome: Community-Based Co-Design**

41

- The story of this wide-ranging design has been one of continual fertile (and on occasion frustrating) co-design with this community.
- The team's long-term involvement has meant they have transformed aspects of the community and that they have themselves been changed in what they view as important, and in how they approach design.

Extended case-study: [www.id-book.com/casestudy\\_11-1.php](http://www.id-book.com/casestudy_11-1.php)

One participant's view of communication

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

**Summary**

42

- Ideas of community are expressed by Ubuntu
- (Ethnographic) Action research allows democratic development
- Ubuntu means the researchers and users form one community: mutually learning and mutually designing

SE in Developing Communities 26/7/11

### Ethics: Ubuntu Action

- Ethics can only be born out of honesty about *ourselves* and the community in which we operate.
- A long-term intimate involvement with a community raises important ethical issues which are fundamentally concerns of reciprocity.
- Explaining your role to the community
  - Explaining what research is
- Avoiding halo effects
  - Use local researchers
- Informed consent
  - Often through proxy (“human-access point”)

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### Realize: I

- The community might be very ambivalent to change since it upsets cherished notions and comfortable dysfunction.

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### Realize: II

- The community reluctance to accept the “beneficial” solutions proposed by the ICT developer might force the developers to give up their cherished notions of progress.
- It is the democratic right of a society to filter new products through their cultural and social requirements.
- The right or wrong of the new application depends on the situated creation of meaning by the community

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### Community Based } Software Engineering Socially Aware }

- Ubuntu provides the grounds for our community based approach to ICT.
- An approach in which researchers and target users become equal members of the same community that is intent on developing knowledge through effective action.
- Each party admits their own legitimate interests in the joint enterprise
  - ⇒ some kind of *Ethnographic Critical Action Research*
  - ⇒ *Action Engineering?*

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### Designed for Use vs Appropriated for Use

- SMS was an afterthought on the GSM standard
- Nokia’s Jan Chipchase: “however we design this stuff — carefully design this stuff — the street will take it and will figure out ways to innovate, as long as it meets base needs”

UNIVERSITY OF CAPE TOWN  
Department of Computer Science SE in Developing Communities 26/7/11

### Action Research >>> Agile Software Engineering

49

- The cyclical nature of action research, where questioning and reflection are tied to intervention, neatly solves the need of users to learn about ICT while the engineers learn about the community within which they are working.
- Need a methodology that not only iterates on the solution, but the problem as well

### Putting ourselves in the design loop?

50

- Is Action Research really >>> Agile or Iterative Software Engineering?
- Can we move :
  - ▣ from designed *for* (4?) systems
  - ▣ towards co-creating designed *with* systems?
- Can we envision a flexibility in ourselves to redesign ourselves as much as we design artefacts outside?
  - ▣ Are our own methods and beliefs as much up for grabs as the cherished values of the community that we are trying to transform with our technology?

### Open ended design?

51

- Is it not probable, once we accept the community as co-designers that we might not even have the last word in design?
  - ▣ Can we facilitate the process by aiming to produce tools rather than finished products?
  - ▣ Are the uses of our systems of necessity situated outside the perspectives which we are able to entertain?
